COVID-19 and Today's Education System

The response to the COVID-19 pandemic caused an immediate coordinated effort to social distance, wear masks, and shelter many sectors of society. The closure of the education system impacted over 55 million students in public, private, and charter schools, colleges, and universities. This sudden disruption inflicted tremendous social and economic costs that have yet to be fully realized.

“ School closures have turned a spotlight on the inequities and other shortcomings... because schools are closed, parents and the general public have become more aware than any other time in my memory of the inequities in children's lives outside of school...in this situation, we don't simply want to frantically struggle to restore the status quo, because the status quo wasn't operating at an effective level and certainly wasn't serving all of our children fairly. Right now, more than ever, there is a real opportunity to make things right for the future...shutting down should not be an option. We have to find some middle ground, and that means the state and local school districts are going to have to act urgently and nimbly to fill in the gaps in technology and internet access. ”

Former Secretary of Education for Massachusetts, Paul Reville, a U.S. American politician, teacher, principal and educational researcher who served as the Secretary of Education from 2008 to 2013 under Governor Deval Patrick. **Education:** Colorado College, Stanford University

Right now, more than ever, there is a real opportunity to make things right for the future.

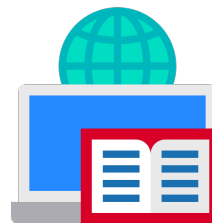

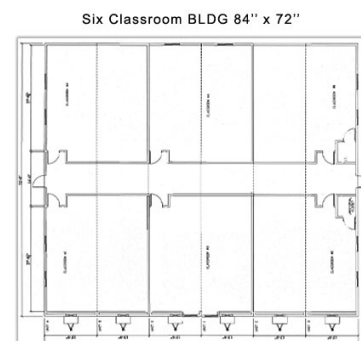

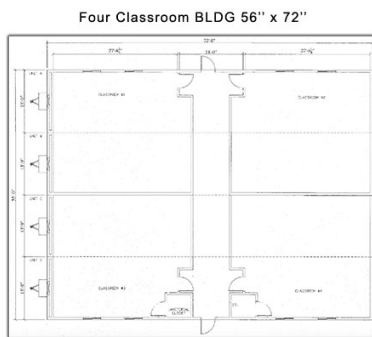

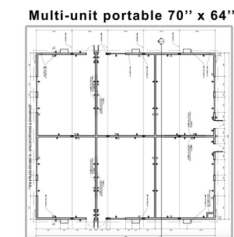

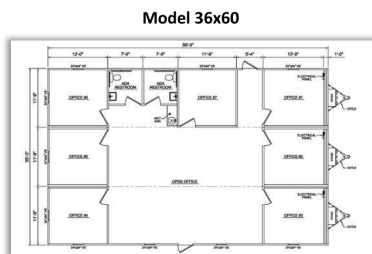

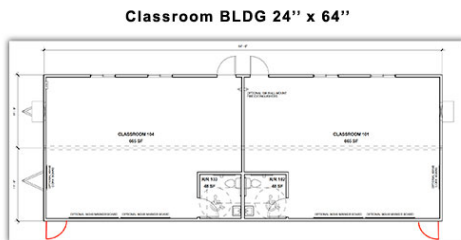

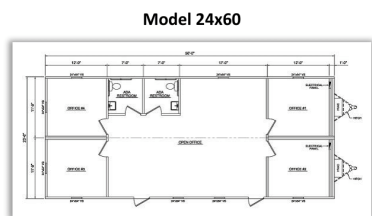

Initially, many schools shut down completely and began to conduct classes via remote learning. As the term suggests, remote learning is where the student and the educator, or information source, are not physically present in a traditional classroom environment; information is relayed through technology, such as discussion boards, video conferencing, and online assessments.

Administrators are currently working on the design and implementation of new systems to get students back in the classroom. Due to financial and resource disparities between districts, schools, and individual students, these systems will need to be engineered to accommodate these disparities.

Building the Post COVID-19 Classroom

Upon reopening, The CDC's recommendations for ongoing social distancing will create a need for more physical space for students, which will require the shifting of resources. Tomorrow's classrooms move away from a crowded shared environment, to smaller, socially-distanced groups. The continued use of e-learning technologies which were adopted during the pandemic can also be incorporated into new classroom designs.

Schools adopting technology to close the digital-learning gap will also be providing a backup system for students who may be unable to attend school. A technology-driven classroom enables teachers and students to access specialized materials.

With resources spread thin, educators should expect to do more with less. Teachers and curriculum may need to be shared between schools and across districts; adopting a more collaborative approach.

Students returning to the physical classroom will be a vital key in reopening the economy.

The possibility of districts digitally sharing resources across multiple campuses, buildings, and classes by instituting remote learning inside the classroom is a good option. Sharing resources is not only a space solution, but a safe solution – both financially and health-wise.

Aries Can Help Implement Your Post Covid-19 Classroom

Every one of our modular classrooms is under stringent codes and regulations, meeting or exceeding that of traditional construction. You'll never have to worry about the quality and safety of your Aries modular facility.

Aries provides a wide variety of finance options for modular buildings, no matter their industry. Our financing solutions include operating leases and finance leases (lease-to-own) as well as short term and long-term financing programs.

A General Services Administration (GSA) approved vendor for modular buildings for more than 16 years, we are fully capable of meeting stringent time & budget needs of government agencies looking to expand using GSA approved modular buildings.

Building your facility off-site while simultaneously progressing any necessary on-site land development allows us to complete your project in half the time of traditional construction. No weather delays, no postponed work schedules, and no surprises.

Since 2009, Aries has provided award-winning manufacturing, construction, and financing solutions for temporary portable and permanent multi-unit buildings in which quality and speed has been our core business strategy since day one.
